

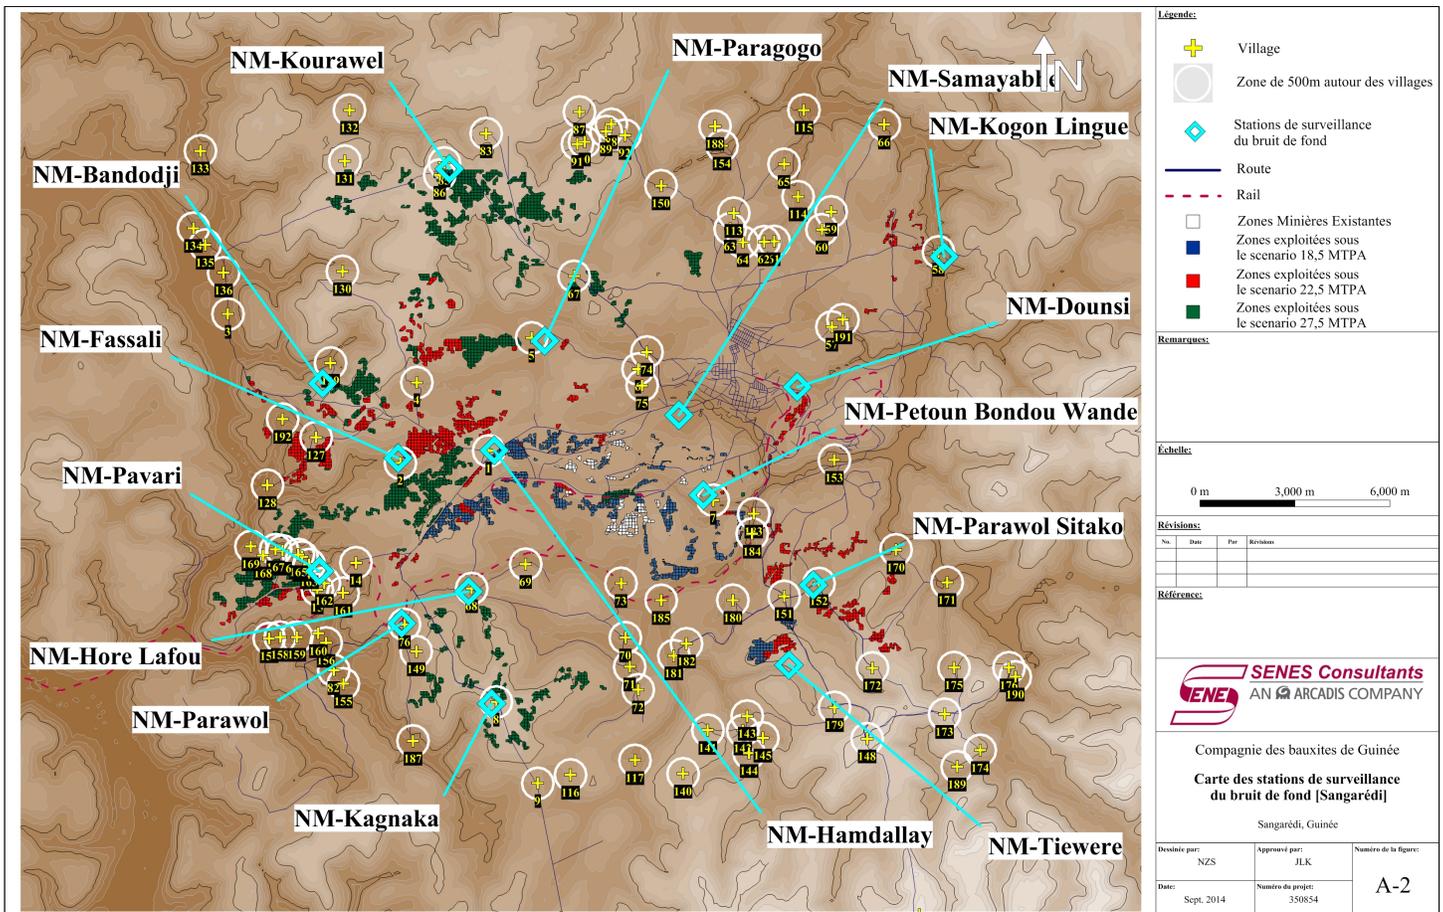

Map 0-5 Sound level measurement stations at Sangarédi (2014)

Existing sound environment at Kamsar

The sound environment in the vicinity of the Kamsar processing facility is influenced by existing material processing operations at the plant, as well as sounds of nature and urban sounds (e.g., traffic, human activity) closer to the city.

Existing sound environment at Sangarédi

Sound levels throughout the region proposed for mining varied depending on proximity to existing infrastructure and mining /hauling operations. The background sound levels in sparsely populated areas are much lower than those measured in the more populated and active areas such as Hamdallaye.
