

The revalidations of system PHA's are conducted to answer the following questions:

- 1) Have significant new hazards been created or introduced into the process?
 - a) This will be accomplished by looking at MOC's, undocumented drawing changes, and Incident Reports.
- 2) Has the possible occurrence of a catastrophic release in the process unit become significantly more likely?
 - a) This will be accomplished using the expertise of the people on the re-validation team.
- 3) Have consequences of previously identified toxic or flammable material releases become more severe?
 - a) This will also be accomplished using the expertise of the people on the re-validation team.
- 4) Have previously identified safeguards become compromised or challenged?
 - a) This will be accomplished by analyzing the safeguards listed during the initial baseline PHA.
